Journal of Materials Processing Technology 83 (1998) 300–303

Journal of Materials Processing Technology

Subject Index of Volume 83

Abrasive jet deburring
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36
Abrasive–water-jet erosion
the kinetic energy of wear particles generated by abrasive–water-jet erosion, 121
Aluminum alloys
front image sensing of the keyhole puddle in the variable polarity PAW of aluminum alloys, 286
Aluminum–magnesium–manganese alloy
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200
Aluminum sheet
anti-galling evaluation in aluminum sheet forming, 185
Anisotropy
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200
Anti-galling
anti-galling evaluation in aluminum sheet forming, 185
Artificial neural networks
towards pultrusion process optimisation using artificial neural networks, 131
Autobody stamping
step-wise combined implicit–explicit finite-element simulation of autobody stamping processes, 245
Automatic local mesh subdivision
the algorithm of automatic local mesh subdivision and its application to finite-element analysis of a large deformation forming process, 164

Ball passes
burnishing force and number of ball passes for the optimum surface finish of brass components, 176
Behavior
quality control in the drawing operation of two-piece printed cans, 267
Blanking
an integrated CAD system for the blanking of irregular-shaped sheet metal products, 84
Bonding strength
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Burnishing force
burnishing force and number of ball passes for the optimum surface finish of brass components, 176

Chip formation mechanism
machining of Al/SiC particulate metal matrix composites: Part II: Workpiece surface integrity, 277
Cladding
fabrication of bimetallic rods by explosive cladding and warm extrusion, 48
Cold-rolled steels
a comparative study of the forming-limit diagram models for sheet steels, 223
Composite (bimetallic)
fabrication of bimetallic rods by explosive cladding and warm extrusion, 48
Computer-aided design and manufacturing
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36
Conventional deep-drawing
applying the finite-element method for determination of tool wear in conventional deep-drawing, 98
Cup-drawing
limiting drawing ratio of the cup-drawing process with stabilization matrices approach, 26
Cutter manufacture
the theory of center offset and its application in cutter manufacture, 217

Debinding
finite-element analysis of the debinding and densification phenomena in the process of metal injection molding, 170
Deep-drawing
development of hydro-mechanical deep drawing, 14
optimization of the draw-die design in conventional deep-drawing in order to minimise tool wear, 106
Densification
finite-element analysis of the debinding and densification phenomena in the process of metal injection molding, 170
Discontinuous Galerkin
numerical modelling of the metal blanking process, 192
Discrete crack approach
numerical modelling of the metal blanking process, 192
Drawbead
the implementation of an equivalent drawbead model in a finite-element code for sheet metal forming, 234
Drawing ratio
limiting drawing ratio of the cup-drawing process with stabilization matrices approach, 26
Drive shaft
dynamic analysis of two types of over-crank guillotine shears—a comparative study, 54
Ductile fracture
numerical modelling of the metal blanking process, 192
Dynamic behavior
dynamic analysis of two types of over-crank guillotine shears—a comparative study, 54
Dynamic deformation
the dynamic deformation measurement of the high speed heated LY12 aluminium plate with moire interferometry, 159

Elsevier Science S.A.
PII S0924-0136(98)00262-3

Earing
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200

Fast heating
the dynamic deformation measurement of the high speed heated LY12 aluminium plate with moire interferometry, 159
Filled composites
prediction of tensile yield strength of rigid inorganic particulate filled thermoplastic composites, 127
Finite element
applying the finite-element method for determination of tool wear in conventional deep-drawing, 98
optimization of the draw-die design in conventional deep-drawing in order to minimise tool wear, 106
the implementation of an equivalent drawbead model in a finite-element code for sheet metal forming, 234
Finite-element method
the algorithm of automatic local mesh subdivision and its application to finite-element analysis of a large deformation forming process, 164
Finite-element model
numerical modelling of the metal blanking process, 192
Finite-element simulation
step-wise combined implicit–explicit finite-element simulation of autobody stamping processes, 245
Formability
a comparative study of the forming-limit diagram models for sheet steels, 223
Forming-limit diagram
a comparative study of the forming-limit diagram models for sheet steels, 223
Front image sensing
front image sensing of the keyhole puddle in the variable polarity PAW of aluminum alloys, 286

Graphitization kinetics
effect of deformation on graphitization kinetics in high carbon steels, 142

High-carbon steel
effect of deformation on graphitization kinetics in high carbon steels, 142
effect of temperature and strain rate on the superplastic behaviour of high-carbon steel, 115
High frequency high temperature grating
the dynamic deformation measurement of the high speed heated LY12 aluminium plate with moire interferometry, 159
High-strength steel
a comparative study of the forming-limit diagram models for sheet steels, 223
Hydro-mechanical
development of hydro-mechanical deep drawing, 14

Implicit–explicit scheme
step-wise combined implicit–explicit finite-element simulation of autobody stamping processes, 245
Industry
innovation in the processing of tonnage materials: examples from the steel and aluminium industries, 1
Integrated CAD system
an integrated CAD system for the blanking of irregular-shaped sheet metal products, 84

Inverse method
inverse computational method for constitutive parameters obtained from torsion, plane-strain and axisymmetric compression tests, 62
Ion-beam-enhanced deposition (IBED)
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Isothermal annealing
effect of deformation on graphitization kinetics in high carbon steels, 142

Jewellery
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36

Keyhole puddle
front image sensing of the keyhole puddle in the variable polarity PAW of aluminum alloys, 286
Kinetic energy
the kinetic energy of wear particles generated by abrasive–water-jet erosion, 121

Large deformation forming processes
the algorithm of automatic local mesh subdivision and its application to finite-element analysis of a large deformation forming process, 164
Low-temperature plasma treatment
surface properties of low-temperature plasma treated wool fabrics, 180
Lubrication
temperature rise in wire-drawing, 72

Machining
machining of Al/SiC particulate metal matrix composites: Part II: Workpiece surface integrity, 277
Mapping
quality control in the drawing operation of two-piece printed cans, 267
Mathematical model
a study of the geometrical models of grinding a spheroid, 231
the theory of center offset and its application in cutter manufacture, 217
Mechanical testing
inverse computational method for constitutive parameters obtained from torsion, plane-strain and axisymmetric compression tests, 62
Metal forming
anti-galling evaluation in aluminum sheet forming, 185
Metal injection molding
finite-element analysis of the debinding and densification phenomena in the process of metal injection molding, 170
Metal-matrix composites
machining of Al/SiC particulate metal matrix composites: Part II: Workpiece surface integrity, 277
machining of Al/SiC particulate metal-matrix composites: Part I: Tool performance, 151
Microhardness
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Microstructure
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Moire interferometry
the dynamic deformation measurement of the high speed heated LY12 aluminium plate with moire interferometry, 159

Numerical optimization
inverse computational method for constitutive parameters obtained from torsion, plane-strain and axisymmetric compression tests, 62
Numerical simulations
development of hydro-mechanical deep drawing, 14

Optimim surface finish
burnishing force and number of ball passes for the optimum surface finish of brass components, 176
Optimization
optimization of the draw-die design in conventional deep-drawing in order to minimise tool wear, 106
towards pultrusion process optimisation using artificial neural networks, 131
Over-crank guillotine shears
dynamic analysis of two types of over-crank guillotine shears—a comparative study, 54

Plastic deformation
temperature rise in wire-drawing, 72
Polishing
semi-ductile grinding and polishing of Pyrex glass, 261
Preston's coefficient
semi-ductile grinding and polishing of Pyrex glass, 261
Process modelling
towards pultrusion process optimisation using artificial neural networks, 131
Production
innovation in the processing of tonnage materials: examples from the steel and aluminium industries, 1
Profile error
a study of the geometrical models of grinding a spheroid, 231
Pultrusion
towards pultrusion process optimisation using artificial neural networks, 131
Pure aluminum
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200

Quality control
quality control in the drawing operation of two-piece printed cans, 267

Rapid prototyping
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36
Remeshing
numerical modelling of the metal blanking process, 192
Rigid particles
prediction of tensile yield strength of rigid inorganic particulate filled thermoplastic composites, 127
Rigid viscoplastic finite-element simulation
inverse computational method for constitutive parameters obtained from torsion, plane-strain and axisymmetric compression tests, 62

Semi-ductile grinding
semi-ductile grinding and polishing of Pyrex glass, 261
Sheet metal
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200
Sheet metal blanking
numerical modelling of the metal blanking process, 192
Sheet metal forming
the implementation of an equivalent drawbead model in a finite-element code for sheet metal forming, 234
Sheet metal products
an integrated CAD system for the blanking of irregular-shaped sheet metal products, 84
Solution accuracy
step-wise combined implicit–explicit finite-element simulation of autobody stamping processes, 245
Spheroid
a study of the geometrical models of grinding a spheroid, 231
Stabilization matrices
limiting drawing ratio of the cup-drawing process with stabilization matrices approach, 26
Stainless steel
applying the finite-element method for determination of tool wear in conventional deep-drawing, 98
optimization of the draw-die design in conventional deep-drawing in order to minimise tool wear, 106
Static behavior
dynamic analysis of two types of over-crank guillotine shears—a comparative study, 54
Stereolithography apparatus
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36
Strain rate
effect of temperature and strain rate on the superplastic behaviour of high-carbon steel, 115
Superplastic behavior
effect of temperature and strain rate on the superplastic behaviour of high-carbon steel, 115
Surface finish
abrasive jet deburring of jewellery models built by stereolithography apparatus (SLA), 36
Surface integrity
machining of Al/SiC particulate metal matrix composites: Part II: Workpiece surface integrity, 277
Surface properties
surface properties of low-temperature plasma treated wool fabrics, 180
Surface roughness
semi-ductile grinding and polishing of Pyrex glass, 261

Tensile instability
a comparative study of the forming-limit diagram models for sheet steels, 223
Texture
analysis on earing behavior of textured pure aluminum and A5083 alloy sheets, 200
Theory of center offset
the theory of center offset and its application in cutter manufacture, 217
Thermoplastics
prediction of tensile yield strength of rigid inorganic particulate filled thermoplastic composites, 127
TiN film
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Tonnage materials
innovation in the processing of tonnage materials: examples from the steel and aluminium industries, 1
Tool materials
anti-galling evaluation in aluminum sheet forming, 185
Tool wear
applying the finite-element method for determination of tool wear in conventional deep-drawing, 98
machining of Al/SiC particulate metal-matrix composites: Part I: Tool performance, 151

optimization of the draw-die design in conventional deep-drawing in order to minimise tool wear, 106
Transformation-induced plasticity
a comparative study of the forming-limit diagram models for sheet steels, 223
Tribology
mechanical and tribological properties of ion-beam-enhanced-deposition TiN thin films, 209
Two-piece DRD can
quality control in the drawing operation of two-piece printed cans, 267

Visible keyhole area
front image sensing of the keyhole puddle in the variable polarity PAW of aluminum alloys, 286
VPPAW
front image sensing of the keyhole puddle in the variable polarity PAW of aluminum alloys, 286

Warm extrusion
fabrication of bimetallic rods by explosive cladding and warm extrusion, 48
Wear model
applying the finite-element method for determination of tool wear in conventional deep-drawing, 98
Wear particles
the kinetic energy of wear particles generated by abrasive–water-jet erosion, 121
Wire-drawing
temperature rise in wire-drawing, 72
Wool fabrics
surface properties of low-temperature plasma treated wool fabrics, 180

Yield strength
prediction of tensile yield strength of rigid inorganic particulate filled thermoplastic composites, 127
